[How Does the Removal of Current HTML Elements Help](#)

There has been a great deal of buzz on how HTML5 will change how web developers work and think. In this article we are going to take a close look at those elements which are going away, why they are being phased out and alternative HTML5 options for those elements.

[HTML 5 Drag & Drop Basics](#)

Microsoft incorporated drag & drop into Internet Explorer 5.0 way back in 1999! With the emergence of Dynamic HTML, other browsers were also able to implement drag & drop. However, it required a lot of scripting to get it to work right. Now, HTML5's native drag & drop capabilities promise to make our lives just a little bit easier.

[Class Member Encapsulation in JavaScript: Advanced Data Hiding Techniques](#)

In a recent article, we saw a couple of ways to create private class member variable. Today we'll be building on our Person class from the last article by adding a prototype interface, use a closure to create a

[Working with Binary Files using the JavaScript FileReader](#)

In a recent article we used the JavaScript FileReader to retrieve file properties and the contents of text files via the `<input type="file" />` HTML form element. Today, we'll be concentrating on the FileReader's capabilities in the reading of binary data.

[How To Create Glowing Text Using CSS3](#)

This article will show you exactly how to make your text glow upon mouse over using nothing but CSS3. It's a pretty cool effect, how you implement it is up to you, and feel free to experiment with the code to make it fit your site.

Recent Articles

[Flashmaps' DynamicLocator: Interactive Maps for Small Areas](#)

Use Flashmaps' DynamicLocator to implement interactive, relatively small area maps. When a user selects an entry in a list, the map will focus on that corresponding object. Users can hover over an area to identify it and click on it for additional information. Try a free evaluation copy.

[Flashmaps' AreaSelector: Interactive Maps for Wide Areas](#)

Flashmaps' AreaSelector product delivers wide area maps. With AreaSelector, you can color-code map areas and display markers on top of the areas. In addition to zooming and panning, users can click to display information as well as select and deselect areas. Register to try a free evaluation copy.

[The DB Mapper: Interactive Street-level Maps of U.S. and Canada](#)

The DB Mapper product from Flashmaps offers interactive street-level maps for the U.S. and Canada. You can display markers on top of the maps to indicate hotels, restaurants, properties and more. Register to try a free evaluation copy.

[The Dangers of HTML5: WebSockets and Stable Standards](#)

New HTML5 technologies like WebSockets offer some amazing new opportunities for Web developers. But they also show how implementing unstable standards may cause more harm to a site than the benefits of the technology. What is the role of browsers and how should developers plan for when developing with HTML5?

[Internet Explorer 6: What Have We Learned?](#)

IE6 shipped more than 10 years ago, but its non-standard implementation of the shifting standards of 2001 still haunts today's developers. As the Web shifts to HTML5, and new versions of IE, Firefox and Chrome debut, have we learned the lessons of IE6?

[Crank Up the Volume with HTML5 Music](#)

With HTML5, music is making a comeback on the Web. Create amazing music site experiences where adding an audio file is as simple as inserting an image and users have more pause and play music outside a browser. The introduction of the `<audio>` tag eliminates the need for external music players, allowing for true integration of sound in your website.

[Dojo.behavior: Write Modularized HTML Document Event Handling](#)

The dojo.behavior module provides a simple and lightweight mechanism for listening to HTML document events. Find out what makes dojo.behavior one of the best event handling mechanisms around.
